Assignment No-2

Q.1] Explain shared memory and shared disk parallel Database Architectures.

Shared memory system -

multiple CPUs are attached to a common global shared memory via interconnection networks or common bus.

Shared memory architectures usually have large memory caches at each processor, so that referencing of the shared memory is avoided whenever possible.

P = processor
D = disk
M = memory

Advantage -

- 1) Efficient commⁿ between processors
- 2) A processor can send message to processor much faster using memory with

Disadvantage -

- 1) Bandwidth Problem
- 2) more number of processor increases waiting time of processors.

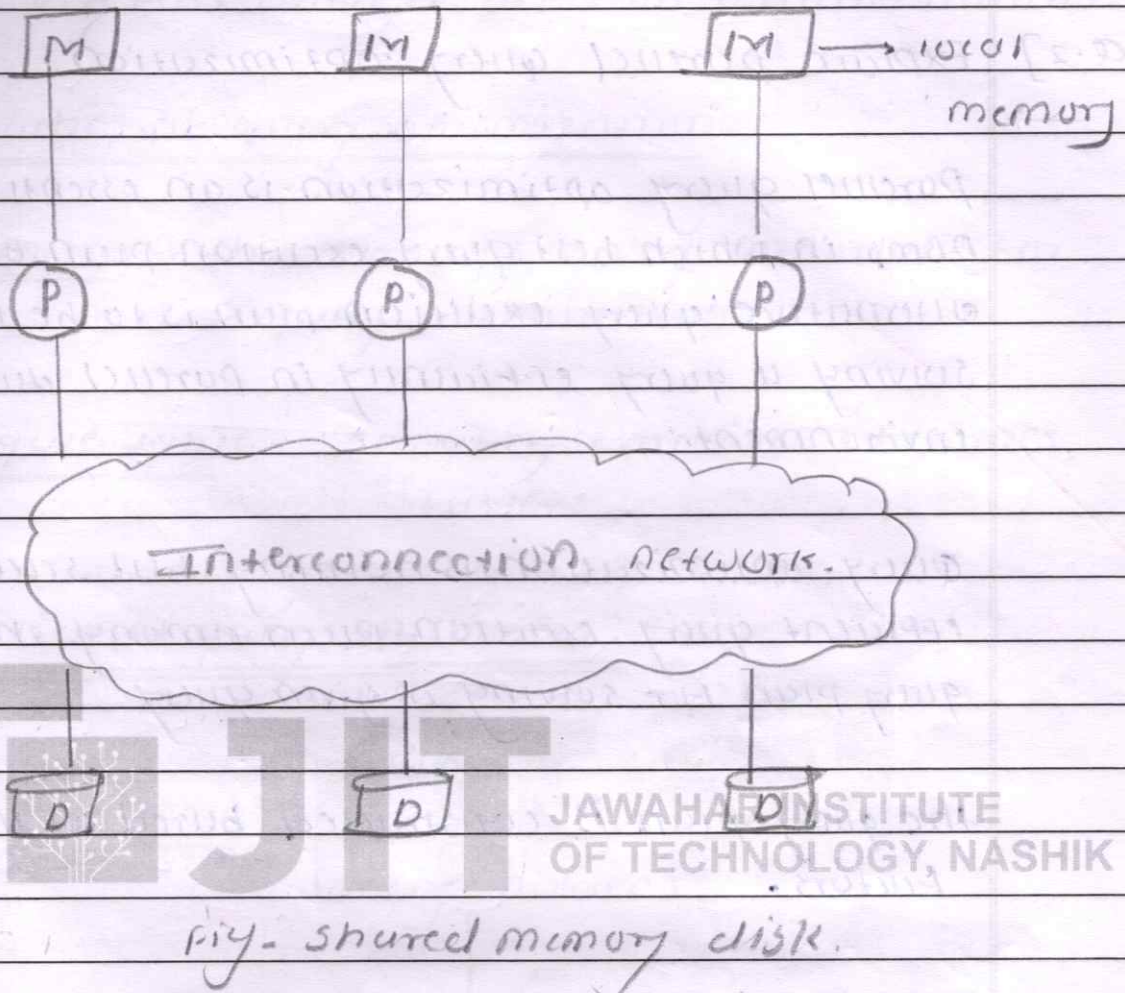

2) Shared Disk System -

Multiple processors can access all disk directly inter commⁿ network. But every processor has its own memory.

Shared disk has two advantage over shared memory.

- 1) Each processor has its own memory
- 2) system offers a simple way to provide a degree of fault tolerance.

The system built around this architecture are called clusters.

Advantage:-

High degree of fault tolerance is achieved

Disadvantage:-

Some memory load is added to each processor.

Application:-

Digital equipment corporation (DEC).

Q.2] Explain parallel query optimization.

→

parallel query optimization is an essential for many DBMS in which best query execution plan out of multiple alternative query execution plan is to be identified for solving a query efficiently in parallel database environment.

query optimization is nothing but selecting the efficient query execution plan among the available query plan for solving a given query.

the query plan is constructed based on multiple cost factors.

there is a trade-off between the amount of time spent to find out the best plan and the amount of time required for running the plan.

Goals of query optimization.

Eliminate all unwanted data -

query optimization tries to eliminate unwanted tuples or rows from given relation.

Speed up queries - try to find out query which y

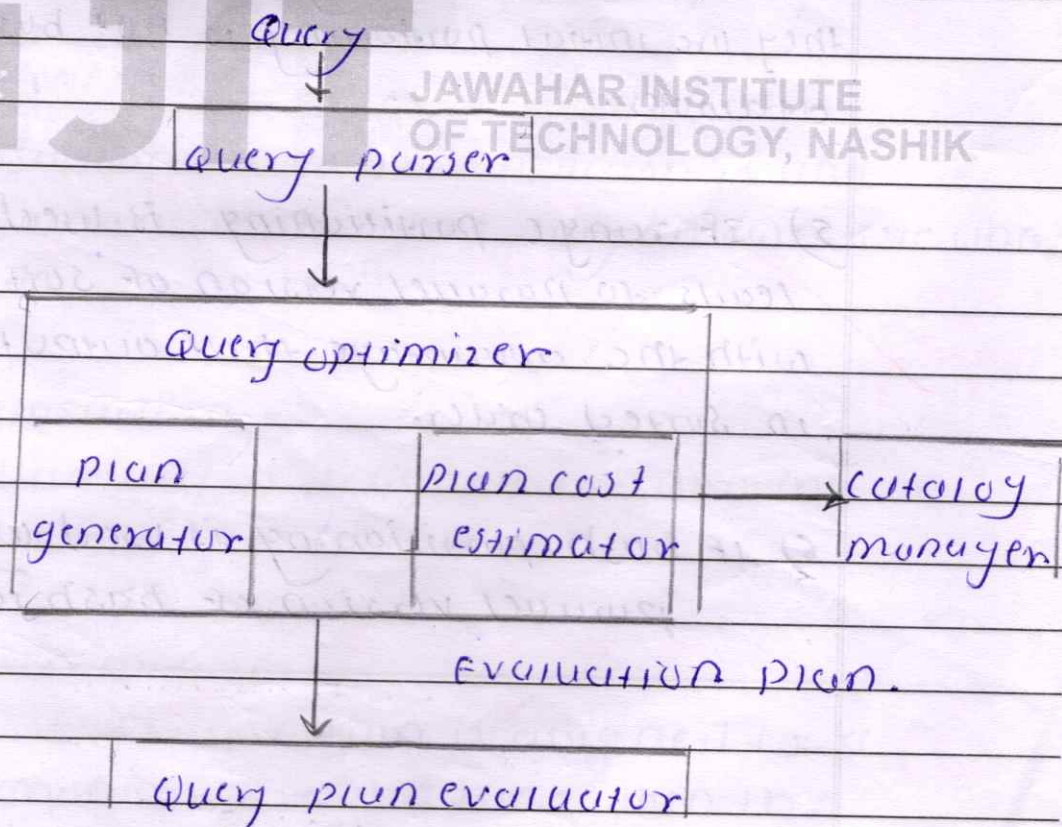

result very fast when executed on parallel database.

Approaches of query optimization.

use index - this strategy is very important for query optimization.

Aggregate table - so, query evaluation becomes faster.

Traditional query optimizers.

Q.3] Explain parallel join operation.

- 1) The main behind parallelisation is to illustrate the use of merge and split operators.
- 2) parallel hash join is widely used type of join. It gives idea how sort-merge join can be parallelized.
- 3) Other join algorithm can be parallelized as well although not as effectively as these two algorithms.
- 4) ex. Suppose that we want to join two relation say R_1 and R_2 on the salary attributes we assume that they are initial partitioning is not based on the join attributes.
- 5) If range partitioning is used the algorithm leads to parallel version of sort merger join, with the advantage that output is available in sorted order.
- 6) If hash partitioning is used we obtain a parallel version of hash join.

Q.4] Explain Distributed Transaction processing.

A distributed database management system should be able to survive in a system failure conditions.

if a DBMS is having a system failure then it should be possible to restart the system without losing any of the information contained in the database.

this property can be offered by transaction processing as in centralised databases.

any transaction can be either local or global transaction.

1) local transaction - A local transaction is any transaction which works only on own site where it is located.

2) Global transaction -

Any transaction designed for working on multiple sites is a global transaction.

3) Transaction monitor -

Transaction is assigned to a transaction monitor and the time when the transaction first enters the distributed database system.

a) distributed commit —

A global site is set many local transactions due to which committing a global transactions becomes more difficult.

Transaction are either completed successfully or all aborted successfully.

Transaction processing is meant for concurrent execution and recovery from possible system failure in a DBMS.

Subject	Data Structure And Algorithms Laboratory Lab : 214447
Course Outcome (CO)	CO1: To study data structures and their implementations and applications. CO2: To learn different searching and sorting techniques. CO3: To study some advanced data structures such as trees, graphs and tables. CO5: To learn algorithm development and analysis of algorithms.

Assignment - 1 : Searching and Sorting

Aim : To implement various searching and sorting algorithm on database of students implemented using array of structure.

Problem statement :

Consider a student database of SEIT class. database

Contain different fields of every student like Roll.No., Name

SGPA. 1) Design a roll call list, arrange list of students

according to roll number in ascending order. 2) Arrange

list of student alphabetically. 3) Search student according

SGPA.

Objective :

- 1) To student the concept of array of structure.
- 2) To understand the concept, algorithm and application of Sorting.
- 3) To understand the concept, algorithm and application of Searching.

Outcome :

- 1) understand linear data structure - array of structure.
- 2) Apply different sorting technique on array of structure
- 3) Apply different searching technique on array of structure and display the output for every pass.
- 4) Calculate time complexity.

Theory:

1) Structure

Structure is collection of heterogeneous type of data. In C++ a structure collects different data items in such a way that they can be referenced as a single unit.

Creating a structures:

struct student

{ int roll_no;

char name [15];

float sgpa;

};

int

char name [15]

float

roll_no

(1 byte each)

SGPA 4 byte

2 bytes

Declaring structure variable:

After declaring a structure, you can define the structure variable, for instance, the following structure variable are defined with the structure datatype of automobile from previous section.

struct student s1, s2, s3;

Referencing structure members with dot operator.

Given the structure student and sl is variable of type struct student we can access the fields:

sl.roll-no;

sl.name

sl.sgpa;

Pointer to structure:

We can declare a pointer variable which is capable of storing the address of a structure variable as follow:

```
struct student * ptr;
```

```
struct student sl;
```

```
ptr = &sl;
```

using ptr can store access the fields of sl:

ptr → name or (*ptr).name

Array of structure:

To declare array of structure:

```
struct student s[20];
```

```
cout << s[3].name;
```

Sorting:

It is the process of arranging or ordering information in the ascending or descending order of the key values.

Bubble Sort:

This is one of the simplest most popular sorting method. The basic data idea is pass through the array sequentially several time. In each pass we compare successive pairs of elements ($A[i]$ with $A[i+1]$) and swap if they are not in the required order.

Example:

Compare two consecutive element, if first element is greater than second then interchange the element else no change.

pass-1

-2	45	0	11	-9
-2	45	0	11	-9
-2	0	45	11	-9
-2	0	11	45	-9
-2	0	11	-9	45

Pass-2

-2	0	11	-9	45
-2	0	11	-9	45
-2	0	11	-9	45
-2	0	-9	11	45

Pass-3

-2	0	-9	11	45
-2	0	-9	11	45
-2	-9	0	11	45

Pass-4 -2 -9 0 11 45 8 2 2 1
 -9 -2 0 11 45 8 2 2 1

Insertion sort

Insertion sort works similarly as we sort cards in our hand in a card game. We assume that the first card is already sorted then, we select unsorted card. If the unsorted card is greater than the card in hand.

Analysis:

Worst case complexity - $O(n^2)$

Best case complexity - $O(n)$

Average case complexity - $O(n^2)$

Examples: need to sort array:

9 5 1 4 3

Step-1 9 5 1 4 3 key = 5

9 9 1 4 3
5 9 1 4 3

Step-2 5 9 1 4 3 Key = 1

5 9 9 4 3
5 9 9 4 3
5 5 9 4 3
1 5 9 4 3

Step-3 1 5 9 4 3 Key = 4

1 5 9 9 3

1 5 5 9 3 24 11 0 2- 2- 0-2209
1 4 5 9 3 24 11 0 2- 2- 0-

Step-4 1 4 5 9 3 key=3

1 4 5 9 3
1 4 5 9 3
1 4 5 9 3
1 4 5 9 3
1 3 4 5 9

Quick Sort:

Quick sort an algorithm based on divide and conquer approach in which the array is split into sub array and these sub-array are recursively called sort the elements.

Analysis:

Worst case complexity - [Big O] - $O(n^2)$

Best case complexity - [Big-omega] - $O(n \log n)$

Average case complexity - [Big-theta] - $O(n \log n)$

Example:

26 22 12 29 19 35 33

Searching:

Searching is a process of retrieving or locating a record with a particular key value.

Linear Search:

Linear Search is the simplest searching algorithm that searches for an element in a list sequential order.

Analysis:

Time complexity - $O(n)$

Space Complexity - $O(1)$

Example:

12 5 10 15 31 20 25 2 40 Search=20

Step-1 12 5 10 15 31 20 25 2 40

no. to search == arr[0]

20 $\neq$ 12

Step-2 12 5 10 15 31 20 25 2 40

no. to search == arr[1]

22 $\neq$ 5

Step 3 12 5 10 15 31 20 25 2 40

no. to search == arr[2]

$20 \neq 10$

Step-4 12 5 10 15 31 20 25 2 40

no. of search == arr[3]

$20 \neq 15$

Step-5 12 5 10 15 31 20 25 2 40

no. of search == arr[4]

$20 \neq 31$

Step-6 12 5 10 15 31 20 25 2 40

no. of search == arr[5]

$20 = 20$

Yes 20 is present in array^{at} 5th position.

Binary Search:

This is a very efficient searching method used for linear / sequential data. In this search, data has to be in the sorted order either ascending or descending. Sorting has to be done based on the key values.

Analysis:

The process terminates when no more partitions are possible i.e. remaining file size = 1

$$n/2^k = 1$$

$$k = \log_2 n$$

Example:

Range middle point
4 5 7 11 12 15 15 21 40 45 key=11
0 1 2 3 4 5 6 7 8 9

0 1 2 3 4 5 6 7 8 9
4 5 7 11 12 15 15 21 40 45

0 1 2 3 4 5 6 7 8 9
4 5 7 11 12 15 15 21 40 45

0 1 2 3 4 5 6 7 8 9
4 5 7 11 12 15 15 21 40 45

Validation :

- 1) Limit of the array should not be -ve, and should not cross the lower and upper bound.
- 2) Roll numbers should not repeat should not -ve.
- 3) Name should only contain alphabets, space and should not allowed any other operation before the i/p list is entered by the user.

Test cases: Sorting

- i) Already sorted according to the requirement.
- ii) Sorted in reverse order.
- iii) partially sorted.
- iv) Completely Random list.

Expected output:

- 1) Test algorithm for above four test cases.
- 2) Analyze the algorithm based on no. of Comparison and swapping / shifting required.
- 3) check for sort stability factor.
- 4) No. of passes needed.
- 5) Memory space required to sort.

Searching:

Find the max and minimum comparison required to search element.

Calculate how many comparison are required for unsuccessful search.

Application:

useful in managing large amount of data.

1. Project Work

The word *project* comes from the Latin word *projectum* from the Latin verb *proicere*, "to throw something forwards" which in turn comes from *pro-*, which denotes something that precedes the action of the next part of the word in time (paralleling the Greek *πρό*) and *iacere*, "to throw". The word "project" thus actually originally meant "something that comes before anything else happens".

(Curtsey Ref- <http://en.wikipedia.org/>)

The intention of Project work is to conceive an idea and to implement it systematically by using knowledge derived during the course of education mainly to innovate or facilitate.

A group of Under Graduate students at Final Year will undertake project over academic year. Work involves study of feasibility of the project, planning of project, studying existing systems, tools available to implement the project and state of art software testing procedures and technology with use of case tools, design is to be implemented into a working model (software or hardware or both) with necessary software interface as an executable package.

1.1. Project Audit Committee (PAC):

It is recommended to form a departmental "Project Audit Committee" to monitor project activities comprising of Head, Project Coordinator, Industry Expert(s), External Expert(s), Department Academic Coordinator and few senior guides.

1.2. Course Objectives:

- To Apply the knowledge for solving realistic problem
- To develop problem solving ability
- To Organize, sustain and report on a substantial piece of team work over a period of several months
- To Evaluate alternative approaches, justify the use of selected tools and methods
- To Reflect upon the experience gained and lessons learned
- To Consider relevant social, ethical and legal issues,
- To find information for yourself from appropriate sources such as manuals, books, research journals and from other sources, and in turn increase analytical skills.
- To Work in TEAM and learn professionalism.

1.2 Course Outcomes:

Students are expected to know and be able to-

CO1. Knowledge Application & Independent Learning: Solve real life problems by applying knowledge and skills keeping eye on current technologies and inculcating the practice of lifelong learning.

CO2. Problem Solving Skills: Analyze alternative approaches, apply and use most appropriate one for feasible solution exhibiting project management skills.

3. Undertaking by Students

With reference to circular (ref-project/2009/3369) regarding malpractices in project work from DTE, Pune following undertaking is to be submitted.

UNDERTAKING BY STUDENT

We, the students of B.E. Computer hereby assure that we will follow all the rules and regulations related to project activity for the academic year 2024 -2025 . The Project titled

Enhancing Navigation for Railway Station Facilities & Location

will be fully designed/ developed by us and every part of the project will be original work and will not be copied/ purchased from any source.

4. Project Review (Semester I)

The group members are expected to present their work undertaken during the semester. Journey of development has to be rationally presented with thorough literature survey in review meeting.

5.1 Project Review-I: Problem Statement, Motivation, objectives and Literature Review

Student is expected to deliver presentation covering Problem Statement, Motivation, objectives and Literature Review.

Sr. No.	Question	Date	Remark / Grade	Sign of Guide
1)	Do Research gap identified lead to find motivation of project?	19/7/24	A+	<u>Sub</u>
2)	Does the statement give clear identification about what your project will accomplish?	19/7/24	A	<u>Sub</u>
3)	Is the statement short and concise?	19/7/24	A+	<u>Sub</u>
4)	Do similar type of methodology / model exists?	19/7/24	A	<u>Sub</u>
5)	Is the studied literature sufficient to decide scope of the project?	19/7/24	A	<u>Sub</u>
6)	Are the objectives clearly and unambiguously listed?	19/7/24	A+	<u>Sub</u>
7)	Can a person who is not familiar with the project understand scope of the project by reading the project problem statement?	19/7/24	A	<u>Sub</u>
8)	Are project objectives of study (what product, process, resource etc.) clearly defined?	19/7/24	A+	<u>Sub</u>
9)	Are the objectives set helpful to achieve goal of the project?	19/7/24	A	<u>Sub</u>
10)	Does the project contribute to our society by any means?	19/7/24	A	<u>Sub</u>

5.3 Project Review-III: Requirement Analysis

Student is expected to deliver presentation covering Requirement Analysis

Sr. No.	Question	Date	Remark / Grade	Sign of Guide
1)	Is information domain analysis complete, consistent and accurate?	9/9/24	A	<u>mb</u>
2)	Is problem statement categorized in identified area and targeted towards specific area there in?	9/9/24	A+	<u>mb</u>
3)	Is external and internal interfacing properly defined?	9/9/24	B+	<u>mb</u>
4)	Are requirements consistent with schedule, resources and budget?	9/9/24	B+	<u>mb</u>
5)	Are all requirements traceable to system level?	9/9/24	A	<u>mb</u>
6)	What is needed to make the product?	9/9/24	A+	<u>mb</u>
7)	Is there a demand for the product?	9/9/24	A	<u>mb</u>
8)	Is identification of stakeholders done properly?	9/9/24	A+	<u>mb</u>
9)	Whether all requirements are captured and documented in line with scope?	9/9/24	A+	<u>mb</u>
10)	Whether all type of analysis classes are identified?	9/9/24	A	<u>mb</u>
11)	Whether the Acceptance criteria is decided	9/9/24	A	<u>mb</u>
12)	Is SRS document as per IEEE format complete and correct?	9/9/24	A	<u>mb</u>

5.4 Project Review-IV: Design

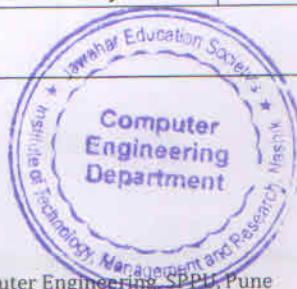

Student is expected to deliver presentation covering Design

Sr. No.	Question	Date	Remark / Grade	Sign of Guide
1)	Are requirements reflected in the system architecture?	4/10/24	A+	<u>mb</u>
2)	Does the design support both project (product) and project goals?	4/10/24	A+	<u>mb</u>
3)	Does the design address all the issues from the requirement?	4/10/24	A+	<u>mb</u>
4)	Is effective modularity achieved and modules are functionally independent?	4/10/24	A+	<u>mb</u>
5)	Are structural diagrams (class, Object, etc) well defined?	4/10/24	A+	<u>mb</u>
6)	Are all class associations clearly defined and understood?(Is it clear which classes provide which services?)	4/10/24	A+	<u>mb</u>
7)	Are the classes in the class diagram clear? (What they represent in the architecture design document?)	4/10/24	A+	<u>mb</u>
8)	Is inheritance appropriately used?	4/10/24	A+	<u>mb</u>
9)	Are the multiplicities in the use case diagram depicted in the class diagram?	4/10/24	A+	<u>mb</u>
10)	Are all objects used in sequence diagram?	4/10/24	A+	<u>mb</u>
11)	Are the symbols used in all diagrams corresponding to UML standards?	4/10/24	A+	<u>mb</u>
12)	Are behavioral diagrams (use case, sequence, activity, etc.) well defined and understood?	4/10/24	A+	<u>mb</u>
13)	Does each case have clearly defined actors and input/ output?	4/10/24	A+	<u>mb</u>
14)	Does the sequence diagram match with class diagram?	4/10/24	A+	<u>mb</u>
15)	Is aggregation/ containment (used) clearly defined and understood?	4/10/24	A+	<u>mb</u>
16)	Whether State charts are capturing system's dynamic behavior correctly?	4/10/24	A+	<u>mb</u>
17)	Related to procedural thinking whether DFDs and CFDs along with transaction and transformation flow are done correctly?	4/10/24	A+	<u>mb</u>

The group members are expected to present their work undertaken during the semester. Journey of development has to be rationally presented.

7.1 Project Review-I: Modeling (Model Refinement and Algorithm development)

Student is expected to deliver presentation covering Modeling

Sr. No.	Question	Date	Remark/ Grade	Sign of Guide
1)	Which software Development Process model is used? (Water fall, Incremental, RAD) How? (at this level?)	17/01/2025	RAD	<u>mb</u>
2)	Are data objects, their attributes and relationships clearly identified? (All constraints for SRS are captured or not?)	17/01/25	Yes	<u>mb</u>
3)	Have the objects and respective classes and their responsibilities?	17/01/25	Yes	<u>mb</u>
4)	Have you analyzed the requirements been analyzed and represented into respective models?	17/01/25	Yes	<u>mb</u>
5)	Have the different system states been differentiated and depicted them in the form of state transition diagram?	17/01/25	Yes	<u>mb</u>
6)	Does the mathematical model clearly imply design of the project?	17/01/25	A* Yes	<u>mb</u>
7)	Does the mathematical model clearly states goal of project?	17/01/25	Yes	<u>mb</u>
8)	Is the interface between the modules properly identified?	17/01/25	Yes	<u>mb</u>
9)	Are any functional dependencies identified and described?	17/01/25	Yes	<u>mb</u>
10)	Which architectural model does the system support?	17/01/25	Yes	<u>mb</u>
11)	Whether Deployment diagram is in line with selected architecture?	17/01/25	Yes	<u>mb</u>
12)	Whether all components are designed properly and represented in component diagram?	17/01/25	Yes	<u>mb</u>
13)	Whether NP-completeness of algorithms is checked?	17/01/25	Yes	<u>mb</u>

7.2 Project Review-II: Coding / Implementation

Student is expected to deliver presentation covering Coding / Implementation

Sr. No.	Question	Date	Remark/ Grade	Sign of Guide
1)	Does the code completely and correctly implement the design?	17/02/25	Yes	<u>mb</u>
2)	Does the code comply with the coding standard?	17/02/25	Yes	<u>mb</u>
3)	Is the code well structured, consistent in style, and consistently formatted?	17/02/25	Yes	<u>mb</u>
4)	Are all functions in the design coded?	17/02/25	Yes	<u>mb</u>
5)	Does the code make use of object oriented concepts?	17/02/25	Yes	<u>mb</u>
6)	Does the code support granularity?	17/02/25	Yes	<u>mb</u>
7)	Is the language used for coding correctly chosen as per the project need?	17/02/25	Yes	<u>mb</u>
8)	If any off-the-shelf components are used, Have you understood the functionalities of using it?	17/02/25	No	<u>mb</u>
9)	Are all comments consistent with the code?	17/02/25	Yes	<u>mb</u>
10)	Whether code optimization is done properly?(By using language features)	17/02/25	Yes	<u>mb</u>

Sr. No.	Question	Date	Remark/Grade	Sign of Guide
1)	Has alpha testing been done?	21/03/25	Yes	<u>mb</u>
2)	Has beta testing been done?	21/03/25	Yes	<u>mb</u>
3)	Have been validated the requirements, design and code as per standard?	21/03/25	Yes	<u>mb</u>
4)	Has GUI testing of project been performed? How?	21/03/25	Yes	<u>mb</u>
5)	Does the system comply with basic usability norms?	21/03/25	Yes	<u>mb</u>
6)	Has the code been tested using standard datasets available in your area of project?	21/03/25	Yes	<u>mb</u>
7)	Has the code been tested in real time environment?	21/03/25	Yes	<u>mb</u>
8)	After integration of all components whether total performance of system is checked?	21/03/25	Yes	<u>mb</u>
9)	Whether repository of all components along with versions is documented?	21/03/25	Yes	<u>mb</u>
10)	Have social, safety, environmental, ethical and legal issues been considered while providing solution to problem?	21/03/25	Yes	<u>mb</u>

Sr. No.	Question	Date	Remark/ Grade	Sign of Guide
1)	Is the report written as per the prescribed format?	11/04/25	A	<u>mb</u>
2)	Is the report timely prepared?	11/04/25	A+	<u>mb</u>
3)	Is the report properly organized, spelled, grammatically correct?	11/04/25	B+	<u>mb</u>
4)	Is the report plagiarism free?	11/04/25	B	<u>mb</u>
5)	Is the report precise and written to the point?	11/04/25	Yes	<u>mb</u>
6)	Does the report contain complete results and comparative graphs?	11/04/25	Yes	<u>mb</u>
7)	Are all figures and tables properly numbered and labeled?	11/04/25	Yes	<u>mb</u>
8)	Are all figures and tables properly cited?	11/04/25	Yes	<u>mb</u>
9)	Weather references are properly cited?	11/04/25	Yes	<u>mb</u>

Project Title :

Smart waste management system using
Arduino-uno

Name of Mentor:

Mrs. J. P. Patil

Preamble

Project Based Learning (PBL) is an instructional approach that emphasizes critical-thinking, collaboration and personalized learning. In PBL, student groups engage in meaningful inquiry that is of personal interest to them. These projects are based on problems, which are real-life oriented, curriculum-based and often interdisciplinary. Students decide how to approach a problem and what activities or processes they will perform. They collect information from a variety of sources, analyze, synthesize and derive understanding from it. The real-world focus of PBL activities is central to the process because it motivates students and adds value to their work. Their learning is connected to something real and involves life skills such as collaboration and reflection. The faculty assigned to the group is referred as mentor. Technology enables students and Mentor in various phases of the PBL process. At the end of the PBL, students demonstrate their newly acquired knowledge and are evaluated by how much they have learned and how well they communicate it. Students also conduct self-evaluation to assess their own growth and learning. Throughout this process, the mentor's role is to guide and advise students, rather than to direct and manage student work.

CERTIFICATE

This is to certify that Mr./ Ms. Patil Janhavi Kewal

Group No. 11 Division _____ Branch Information Tech. has successfully

completed the work associated with **Project Based Learning (214458)** titled as- Smart

214458: Project Based Learning

Teaching Scheme:

Practical (PR): 04hrs/week

Credit Scheme:

02

Examination Scheme:

TW : 50 Marks

Course Objectives :

- To learn the various processes involved in project based learning.
- To develop critical thinking and engineering problem solving skills amongst the students.
- To explain the roles and responsibilities of IT engineers to the solution of engineering Problems within the social, environmental and economic context.
- To equip the students with knowledge and skills require to develop solutions for the Problems coming from various Hackathon.

Course Outcomes :

- **CO1 :** Design solution to real life problems and analyze its concerns through shared cognition.
- **CO2 :** Apply learning by doing approach in PBL to promote lifelong learning.
- **CO3 :** Tackle technical challenges for solving real world problems with team efforts.
- **CO4:** Collaborate and engage in multi-disciplinary learning environments

Group Structure :

Group structure should enable students to work in mentor-monitored groups. The students plan, manage and complete a task/project / activity which address the stated problem:

1. There should be a team of 3 to 6 students who will work cohesively.
2. A Mentor should be assigned to individual groups who will help them with learning and development process

Selection of Project/Problem :

1. The project scope/topic can be from any field/area, but selection related to IT technical aspect is desirable.
2. The project/problem done in first year engineering could be extended further, based on its potential and significance analysis.
3. Project/problem requiring solutions through conceptual model development and use of software tools should be preferred.
4. Different alternate approaches such as theoretical, practical, working model, demonstration or software analysis should be used in solving/implementing of project/problem.
5. The project/problem requiring multi-disciplinary approach to solve it, should be preferred.
6. Problem may require in depth study of specific practical, scientific or technical domain.
7. Hands-on activities, organizational and field visits, interacting with research institutes and expert consultation should be included in the approach to make students aware of latest technologies.

Assessment:

The department should be committed to assess and evaluate both student performance and solution impact. Progress of PBL will be monitored regularly on weekly basis. Weekly review of the work is necessary. During process of monitoring and continuous assessment and evaluation the individual and team performance is to be measured by mentor. Students must maintain an institutional culture of authentic collaboration, self- motivation, peerlearning and personal responsiveness. The institution/department should support students in this regard through guidance/orientation programs and the provision of appropriate resources and services. Supervisor/mentor and students must actively participate in assessment and evaluation processes. Group may demonstrate their knowledge and skills by developing a public product and/or report and/or presentation.

1. Individual assessment for each student (Understanding individual capacity, role and involvement in the project).
2. Group assessment (roles defined, distribution of work, intra-team communication and togetherness).
3. Documentation and presentation.

Evaluation and Continuous Assessment:

It is recommended that the all activities are to be recorded in PBL workbook, regular assessment of work to be done and proper documents are to be maintained at college end by both students as well as mentor. The PBL workbook will reflect accountability, punctuality, technical writing ability and work flow of the task undertaken. Continuous Assessment Sheet (CAS) is to be maintained by all mentors/department. Recommended parameters for assessment, evaluation and weightage:

1. Idea Inception (5%)
2. Outcomes of PBL/Problem Solving Skills/Solution provided/Final product(40%) (Individual assessment and team assessment)
3. Documentation (Gathering requirements, design & modeling, implementation/execution, use of technology and final report, other documents (25 %)
4. Potential for the patent(10%)
5. Demonstration (Presentation, User Interface, Usability etc.) (10%)
6. Contest Participation/ publication (5%)
7. Awareness/Consideration of Environment/ Social /Ethics/ Safety measures/Legal aspects (5%).

Design the rubrics based on the above parameters for evaluation of student performance

Note:

- While planning for the assessment, **choose a valid method based on your context**. It should be **able to understand by both the students as well as the faculty**.
- The student group must **follow the principles of Software Engineering** (Scoping out the problem, the solution implementation and related documentation).
- If the implementation code is well documented, the project can be **continued by subsequent batch** – which will help solve a bigger problem.

4. Project Information Sheet

Project ID	PBL-G-11				
Title	Smart waste management system using Arduino				
Problem Statement	Smart waste system revolves around the efficiency and environmental impact of current waste management practices. Lack of real-time data, leading to missed collection, increase costs & environmental pollution.				
Name of Mentor	Mrs. J. P. Patil

5. Continuous Assessment and Remarks Sheet (To be filled in by mentor)

Problem Identification (Idea Inception) – IoT-based smart waste management system is driven by the primary goal of contributing to the Swachh Bharat Abhiyan. The objective is to address the importance of maintaining cleanliness in waste disposal areas as poorly managed bins can lead to an unhealthy environment and various pollutants.

Problem Analysis (Requirement Gathering) – For developing the waste system we need:

- ① ultrasonic sensor
- ② Arduino-uno
- ③ Jumper wires
- ④ soil moisture sensor
- ⑤ Servo Motor

Proposed Solution Model/Design/ Process / prototype – The smart dustbin is divided into two parts waste dry and wet waste. The Arduino-uno consists the code of system. The soil moisture sensor tests the dry and wet density and acts further. Servo motor is used to shift between dry and wet waste.

Technology Solution Model- After connecting the jumper wires to the Arduino and other components. Code is provided to the Arduino through Arduino-uno IDE software. The code is in C++ Arduino language.

Expected Outcomes- After all the assembly the waste put on the soil moisture sensor should be placed into proper waste category either dry or wet waste.

Implementation and Testing- Put dry waste a test whether the waste falls down in dry section the test same for wet waste. If does not work look for all the connections properly and for the code in Arduino IDE app.

Regularity (Attendance + Weekly Progress Reporting) -

Team maintained good regularity with full attendance and submitted weekly progress reports to track development, resolve issues and ensure steady project progress.

Awareness / Consideration of - Environment / Social / Ethics / Safety measures / Legal aspects -

waste system planners challenge and keep humans away from any bacterial disease happening from wet and dry waste.

Contest Participation / publication -

There is no mention of contest participation or publication in the report. The focus was developing and presenting the project within the academic framework.

Report -

Smart waste management system promotes habitually, cleanliness, and environmental protection.

Subject: Request for Correction of Insem marks
in Examination Result.

Respected Sir,

I Sakshi Gautam Tejale from BE Computer. I am writing this letter to formally request a correction in my third year examination result due to an error in the marks entered for my SYS. Prog & Operating Sys. (310243). My insem marks were updated to 15 and my end sem marks are 30, which is sufficient for passing. However, it appears that the previous in-sem marks 05, were mistakenly entered instead of the updated marks, leading to a failed status in my result.

I kindly request you to verify my records and update my marks accordingly.

Thank you for your time and consideration. I look forward to your positive response.

Respected Sir,

Kindly allow Apology
for mistake. request
