Policies for education of Slow learner and Advance Learner

During the path of teaching and learning process teachers have to deal with different types of learners. For example, Some students are very intelligent and can acquire learning very rapidly, some learn at average rate and some are very weak and slow in learning. On the basis of learners level of learning students are categorized as slow and advance learner. Institute has tried to develop a policy to deal with different type of learners. The Policy improves the learning capacity of both slow and advance learner.

Slow Learner - Those learners who are unable to deal with academic skills and activities what advance learner will do in normal classroom. Due to poor and slow grasping powers or some other reasons. The regular classroom curriculum and learning are applicable to slow learner with remedial education.

Advance Learner -Those learners who can learn faster and remember for long period of time than the slow learner and have strong grasping power. If proper experiences are provided they can be the future innovators, problem solvers or evaluators.

The process of Identification

To identify slow and advance learner following inputs are considered.

1. Overall result of previous examination
2. Result of Prerequisite test.
3. Result of internal assessment (Unit test)
4. Class observation of subject teacher.

The slow and Advanced learners would be identified for each subject separately by respective subject teacher for all programs combined with class co-ordinator.

The process of identification would be conducted after declaration of preceding exam result, considering class performance in existing academic session and personal observations of subject teacher.

- Subject teacher's observation should be recorded as per student's attendance and performance in class.
- A report would be prepared for whole class of Unit Test of 30 Marks. Where previous examination result where student fail in more than 3 subjects are slow learner and others are advance learner.
- Marks obtained in prerequisite test below or above 40% marks will be considered slow or advance learner respectively.
- The student securing marks below 40% would be identified as slow learners.
- The student securing marks above 40% would be identified as advance learner.

- At last list of slow learners is prepared for next action.

Strategies to deal with slow learner

Considering the characteristics of slow learner, following strategies may be adopted to deal with their problems.

1. Extra classes are conducted with appropriate focus on subject or topic in which students are found slow.
2. Individual academic counseling is done by concerned subject teacher.
3. Students are asked to solve extra assignments.
4. Personal counseling is done through mentoring (Teacher guardian) scheme which takes care of the students mentors maintain the entire academic record of the student which is also conveyed to the parents time to time by the teacher guardian. Slow learners are counseled and motivated by the mentors.

Special activities conducted for Advanced Learners

1. Encourage students to enroll and register for NPTEL courses.
2. Guiding for career planning.
3. Discussion on the advanced topic.
4. Guiding the students for Competitive Examinations.
5. Arranges Training programs for gaining advanced technical knowledge.
6. Encourage students to participate in various symposiums like online internships, quiz, poster presentation, Conferences, inter institution competition etc.

Assignment No: I

1] Differentiate between Object Oriented Programming and Procedural Oriented Programming

Procedural Programming Language

Object Oriented Programming Language (OOP)

- | | |
|---|--|
| <ol style="list-style-type: none"> 1. The procedural programming executes series of procedures sequentially 2. This is a top down programming approach 3. The major focus is on procedures or functions. 4. Data reusability is not possible 5. Data hiding is not possible 6. It is simple to implement 7. For example: C, Fortran, COBOL | <ol style="list-style-type: none"> In object oriented programming approach there is a collection of objects This is a bottom up programming approach The main focus is on objects Data reusability is one of the important features of OOP. Data hiding can be done by making private It is complex to implement For Example: C++, Java |
|---|--|

2] What are the advantages and disadvantages of Object Oriented Programming?

Advantages

1. It is easy to partition the work on project based on object

- 2 The principle of data hiding helps the programmer to build secure programs.
- 3 It is easy to relate with real world objects.
4. Through inheritance, we eliminate the redundant code.
- 5 It is easy to update.

Disadvantages

- 1) Steep learning curve: The tough process involved in object-oriented programming may not be natural for some people.
- 2) Larger program size: programs typically involve more lines of code.

3) Write a short note on

a) Data abstraction:

- It represents the essential information without showing the background details that is to represent the needed information in programme without representing the other details.

Ex:- If there is a class of circle we need to define the radius of the object of the circle class.

b) Inheritance

- The mechanism of deriving the properties of one class into another class.

is known as inheritance. The child class acquires all the properties and methods of a parent class.

Ex:- Rectangle & triangle both classes acquire the properties of shape class.

3) Polymorphism:

- Poly means many and morph means form. Hence, polymorphism means multiple forms of the same thing.

Ex:- water, water is available in liquid, as well as vapour form.

4) Data Encapsulation:-

- The data of an object is hidden from other objects. This is called as data encapsulation. Also the wrapping up of data members and methods of a class is called as data encapsulation. It is achieved by putting data and functions associated with it into a class.

4) Design a class 'Student' with suitable variables and methods. Create the database of the students and display the records using an array of objects.

→ An array of objects is created using Object class is the root class of all classes.
 class-Name [] Object Array reference

Alternatively, we can also declare an Array of object as;

```
class-Name ObjectArray reference[];
```

And once an array of objects is instantiated like this, then the individual elements of the array of objects needs to be created using the new keyword.

Different ways to initialize the array of objects:

- 1) By using the constructors
- 2) By using a separate member method

```
class GFG {
```

```
    public static void main (String [] args) {
```

```
        Student [] arr;
```

```
        arr = new Student [2];
```

```
        arr[0] = new Student (1701289270, "satyabhat");
```

```
        arr[1] = new Student (171289119, "omprasad");
```

```
        System.out.println ("Student data in student arr0:" +  
            arr[0].display());
```

```
        System.out.println ("Student data in  
            student arr 1:" );
```

```
        arr[1].display();
```

```
class Student {
```

```
    public int id;
```

```
    public String name;
```

```
student (int id, string name)
```

```
{
```

```
    this.id = id;
```

```
    this.name = name;
```

```
}
```

```
public void display ()
```

```
{
```

```
    System.out.println (" student id is : " +
```

```
        " student name is " + name );
```

```
    System.out.println ();
```

```
}
```

```
}
```

O/p =

Student data in student arr 0 :

Student id is : 1701289270

Student name is : Satyabrata

Student data in student arr 1 :

Student id is : 1701289219

Student name is : ammpasad

5] Write a java program to check the
no is palindrom or not.

=> import java.util.*;

class Palindrome

```
{
```

```
    public static void main (String args[])
```

```
{
```

```

string str;
int i, n;
Scanner sc = new Scanner(System.in);
System.out.println("Enter a string:");
str = sc.nextLine();
n = str.length();
char c[] = new char[n];
char rev[] = new char[n];
c = str.toCharArray();
for (i = 0; i <= n - 1; i++)
{
    rev[n - i - 1] = c[i];
}
for (i = 0; i <= n - 1; i++)
{
    if (rev[i] != c[i])
        break;
}
if (n == i)
    System.out.println("Palindrome");
else
    System.out.println("Not Palindrome");
}

o/p = Enter a String :
      bench
      Not Palindrome

```

6] Explain JVM architecture

=>

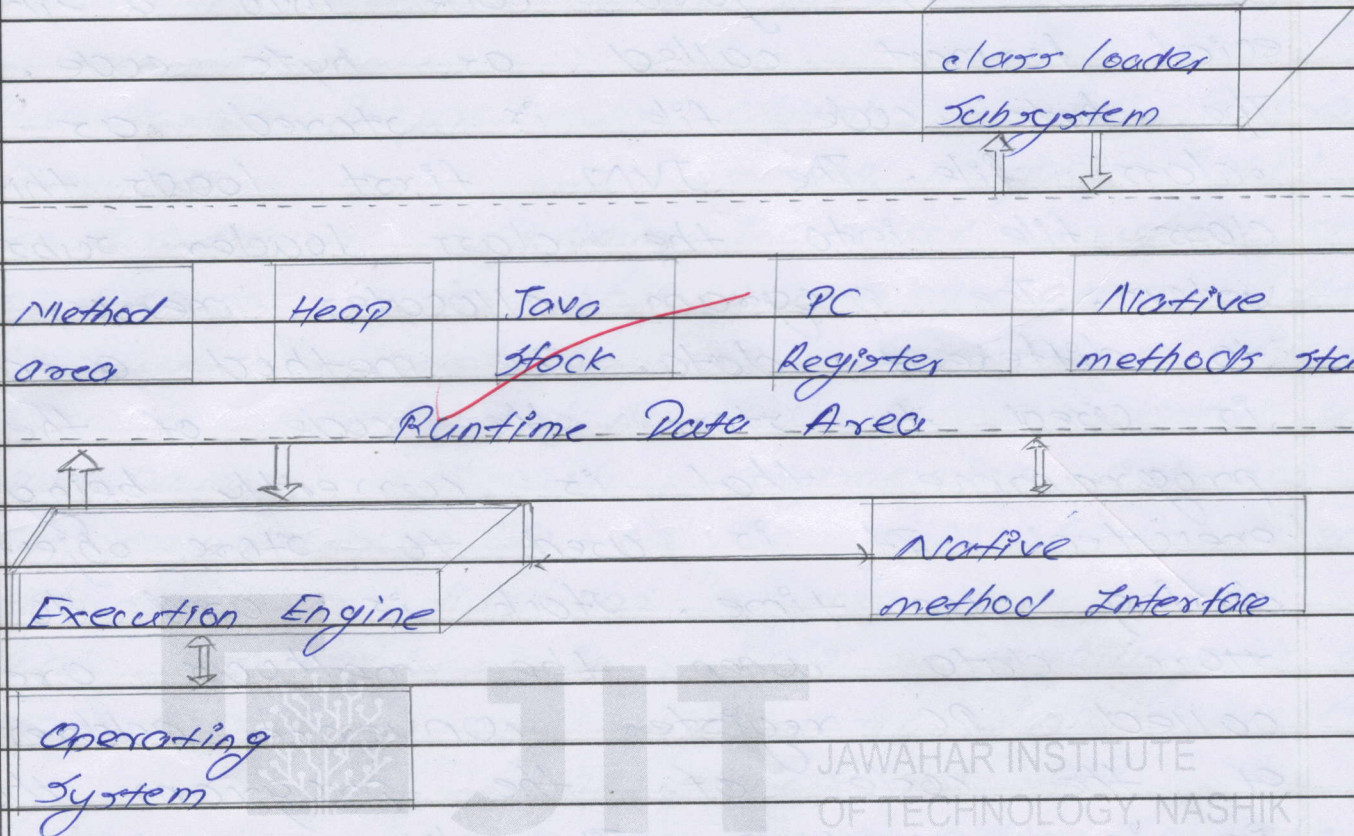

Fig : Java Virtual Machine

A Java program is to be stored with the Java extension. Operations performed by JVM are as follows

- 1) Loads the code
- 2) Executes the code
- 3) Verifies code
- 4) Provides runtime environment.

When the source code is compiled by the java compiler ie. Java C, it converts the java code into a special format called as byte code. The byte code file is stored as .class file. The JVM first loads this class file into the class loader subsystem. The program allocates memory to different data. The method area is used to store the code of the programme that is currently being executed. It is used to store objects during run time. Stack is used to store data when the methods are called. PC register contains address of the code of the program that is in execution. The library file methods that are executed that are called as native methods. Execution engine acts as an interpreter that translates the byte code into a machine code.
